# Final Reports - MATH620152

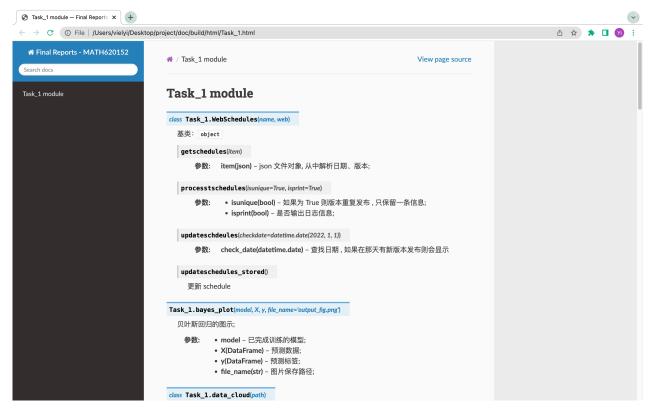

• Author: 吴羿 22210180064

## 主要程序文件

- 1. Notebook 程序文件结构:
  - o Task-1.ipynb 包含:4个类, 18个各类知识点汇总;
  - o Task-2.ipynb 包含:2个类及 Seaborn 绘图, 8个各类知识点汇总;
  - Task-3.ipynb 包含:基于Pytorch实现的全连接神经网络, 4个各类知识点汇总;
  - o Task-4.ipynb 包含:基于gurobipy实现的神经网络,2个各类知识点汇总;
  - R stratup.R 包含:基于 R 的初学者级的应用
- 2. 分列的 torchex\_main.py 以及 AsData.py 文件
  - o AsData.py 提供 Pytorch 的 Dateset 定义模块
  - o torchex\_main.py 方便命令行调用
- 3. 文件夹 doc 提供了由 **syphinx** (司芬克斯)自动生成并建立的程序说明文档

syphinx项目地址: <a href="https://www.sphinx-doc.org/en/master/">https://www.sphinx-doc.org/en/master/</a>

- 在 ./doc/build/html 文件夹下,提供了 Task-1.ipynb 和 Task-2.ipynb 中共计6个类的说明文档
- 检阅该HTML可以得到项目的完整说明(该文档提供搜索、目录等各类功能)

o 在 ./doc/code 路径下可以找到这两个包含所有类的 .py 文件

## 支持文件

支持文件目录为 ./support 和 ./output

- ./output 是程序文件默认的输出目录

## 文档汇总

所有的文档文件已经汇总到目录 ./PDFandHTML 文件夹下

#### 环境说明

由于使用了Pytorch,非常有必要在此声明所使用的环境

```
[(base) → ~ conda env list
# conda environments:
#
                         /Users/vielyi/miniforge3
                      * /Users/vielyi/opt/anaconda3
base
                         /Users/vielyi/opt/anaconda3/envs/gurobi
gurobi
                         /Users/vielyi/opt/anaconda3/envs/pytorch
pytorch
tf_m1
                         /Users/vielyi/opt/anaconda3/envs/tf_m1
[(base) → ~ conda activate pytorch
[(pytorch) → ~ conda list | grep torch
# packages in environment at /Users/vielyi/opt/anaconda3/envs/pytorch:
pytorch
                         1.14.0.dev20221026
                                                    py3.8_0
                                                               pytorch-nightly
torch
                         1.12.1
                                                  pypi_0 pypi
torch-summary
                         1.4.5
                                                  pypi_0 pypi
torchaudio
                         0.14.0.dev20221026
                                                  py38_cpu pytorch-nightly
torchtext
                         0.13.1
                                                  pypi_0 pypi
torchvision
                         0.15.0.dev20221026
                                                   py38_cpu pytorch-nightly
(pytorch) → ~ ■
```

该版本的 **Pytorch** (nightly) 为 MacOS M1架构进行设计,程序中 torch.device("mps" if use\_cuda else "cpu") 是在 MacOS 中启用 GPU 的标准格式,如果报错,请确认GPU空间充足或者直接使用CPU进行训练;

在 torchex main.py 中使用了 argparse 库以保证可以以更加标准和规范的方式使用 Pytorch

你可以在命令行中用如下命令以默认参数的方式运行该程序

```
[(pytorch) → ~ cd desktop
[(pytorch) → desktop cd project
[(pytorch) → project python torchex_main.py
You are using mps!
Train Epoch: 1 [0/1554 (0%)]
                                    Total Loss: 2957.136963
Train Epoch: 1 [160/1554 (10%)] Total Loss: 382.936737

                                           Total Loss: 248.143280
 关于参数的说明也可以查看:
    [(pytorch) → project python torchex_main.py -h
    usage: torchex_main.py [-h] [--batch-size N] [--test-batch-size N] [--epochs N] [--lr LR]
                             [--gamma M] [--no-cuda] [--dry-run] [--seed S] [--log-interval N]
                             [--save-model]
     Example for Pytorch
     optional arguments:
      -h, --help
                            show this help message and exit
       --batch-size N
                            input batch size for training (default: 16)
      --test-batch-size N input batch size for testing (default: 16)
                            number of epochs to train (default: 8)
      --epochs N
       --lr LR
                            learning rate (default: 0.5)
      --gamma M
                            Learning rate step gamma (default: 0.7)
       --no-cuda
                           disables CUDA training
      --dry-run
                           quickly check a single pass
                            random seed (default: 1)
       --seed S
```

how many batches to wait before logging training status

For Saving the current Model

--log-interval N

--save-model
